

Sensitivity of the developmental-stage comparisons

96-h Cu-Cd developmental-stage mixed-effects model

1 = equal LC50 between stages.

RoR = ratio of ratios; 1 = the developmental-stage contrast is the same in Cu and Cd.
Grey bands show point-estimate ranges when one publication (LORO) or one species group (LOSO) is omitted at a time.
CC = records with both temperature and salinity reported.
CC + T + S = the same subset with temperature and salinity added to the model.
