

Sensitivity of the taxonomic-order comparisons

96-h Cu-Cd taxonomic-order mixed-effects model

1 = equal LC50 between orders.

RoR = ratio of ratios; 1 = the taxonomic-order contrast is the same in Cu and Cd.

Grey bands show point-estimate ranges when one publication (LORO) or one species group (LOSO) is omitted at a time.

CC = records with both temperature and salinity reported.

CC + T + S = the same subset with temperature and salinity added to the model.
